Laxman Singh Jadon

A journey through people, policy, and purpose

+91 8383842382 · luckysingh0508.lsj@gmail.com · Greater Noida, India – 201318

Every career is a story before it's a résumé. This one begins with a curiosity about how people and systems work — economics, sociology, literature, an early aim at the civil services — and moves, chapter by chapter, from learning HR's fundamentals to now leading both HR and Project Delivery for a defence technology company. The pages that follow trace how one led to the next.

THE JOURNEY

2014 – 2018 · Foundations — Learning How People and Systems Work

The story starts not in an office, but in a classroom. A Bachelor’s in Economics, Sociology and English Literature, followed by a Master’s in Rural Development and a foundation aimed at the UPSC civil services, built a mind trained to read people, policy, and systems together — not as separate subjects, but as one continuous fabric. That habit of thinking never really left.

Dec 2019 – Jan 2024 · First Steps — Building Discipline in HR

The first real chapter began at Tricornio Technologies as an HR Officer, learning HR from the ground up: employee records, payroll, statutory documentation, the unglamorous groundwork that everything else is built on. Four years of getting the fundamentals right — with zero compliance deviations — earned recognition as Best Employee of the Year, and something more lasting: a reputation for reliability.

Jul 2024 – Jul 2025 · Scaling Up — From HR to Multi-State Operations

At Kasper Infrastructure, the scale changed overnight — from a single site to HR leadership across 600+ employees on multi-state infrastructure projects. This chapter also planted a quiet seed: coordinating HR and operations for the Mahakumbh 2025 Tent City Project, 200 luxury tents, dozens of stakeholders. It was the first time HR work and project delivery sat side by side — a pairing that would return later, this time by design.

Jul 2025 – Oct 2025 · Full Ownership — Running a Plant, End to End

A short but intense stint as Plant Manager at Kasper Engineering meant owning everything under one roof — HR, admin, security, vendors, housekeeping, discipline. It was a compressed lesson in what it takes to run a complete operation single-handedly, and it rounded out a skill set that had, until then, mostly lived inside HR alone.

Jan 2026 – Aug 2026 · A Fast Rise — Trust Earned in Months

Joining IG Strategic Systems Pvt Ltd (IG Defence, formerly IG Drones) as HR Associate-II in January 2026 marked the start of the fastest chapter yet — promoted to HR Associate-III that April, then to HR Lead by June. Years of groundwork, compressed into months of recognition.

Aug 2026 – Present · Today — Where HR Meets Project Delivery

In August 2026, a second charge arrived: Project Delivery Department HOD, held alongside HR Lead. This is the point where the story’s threads finally meet — the compliance rigor from Tricornio, the multi-state scale from Kasper Infrastructure, the end-to-end ownership from the plant, and that early taste of project coordination at Mahakumbh, all converging into one role. Today that means leading hiring and HR policy for the organisation, and directly coordinating with Business Development on demos, trials, on-site delivery, ATP and client training for defence products — HR and delivery, no longer separate stories.

THREADS THAT CONNECT

People First

A sociology and rural-development background shows up daily in how grievances are heard and policies are written — with the person, not just the process, in view.

Discipline & Compliance

The UPSC-oriented foundation left behind a habit of rigor: 100% statutory documentation accuracy, audit-ready records, and compliance governance pushed from 30% to 93%+ pre-deadline at Kasper Infrastructure.

Operations at Scale

From a 60-person plant to 600+ employees across multi-state projects to now a full HR-and-delivery function — each chapter added a layer of scale the last one didn't have.

Curiosity & Continuous Improvement

Chess, coding, and an interest in AI in HR aren't side notes — they're the same instinct that led to implementing HRMS platforms, Lean Six Sigma thinking, and automation wherever HR operations could run smarter.

WHERE I AM NOW

Today, as HR Lead and Project Delivery Department HOD at IG Strategic Systems Pvt Ltd (IG Defence), the two sides of this journey run in parallel. On the HR side: end-to-end hiring across niche technical, white-collar and blue-collar roles; HR and organisational policy development; general administration, SOP design and security protocol enforcement; and direct oversight of IT, Admin, Talent Acquisition, HR Operations, Policy & Governance, Payroll & Compliance, Housekeeping, Kitchen & Cafeteria, Security & Movement Control, Facility Management, Asset Management, and external vendor teams. On the Project Delivery side: coordinating closely with Business Development on demos, TEC, trials and product showcases; leading on-site delivery and testing, ATP, and post-delivery client training; and stepping in wherever technical, mechanical or software support is needed to get a project across the line.

An MBA in HR & Operations, currently underway at LPU, is the next deliberate step — formalising what the last six years have taught through practice, and pointing toward where people strategy and operational delivery can go next.

A TURNING POINT — BUILDING FROM SCRATCH

One piece of this journey stands apart from the rest: setting up IG Defence's Production & Manufacturing department from the ground up. The obvious path would have been hiring highly-paid engineers for basic assembly work — instead, the model was rethought entirely. A large blue-collar workforce, many with little formal technical education, was trained for assembly work, while engineers were reserved for testing and quality control, where precision and zero-fault outcomes matter most.

The shift wasn't instant — the first few weeks meant real adjustment. But within weeks, that same workforce had adapted, and the training programmes built around them turned into a repeatable system. The outcome: production costs fell drastically without compromising on quality, and a workforce once considered unsuited to precision work began building highly technical, world-class drones — a first-of-its-kind approach, and proof that the right training can turn an overlooked workforce into a genuine competitive advantage.

THE DETAILS

EDUCATION

MBA, HR & Operations Management — LPU · 2026
MA, Rural Development — IGNOU · 2018
BA, Economics, Sociology, English Literature — JU · 2016
Diploma in Computer Application — MMYVV, M.P. · 2014
